Make sure you get a cable that's long enough to let you move the subwoofer around because you may need to reposition your subwoofer as you discover how it interacts with your home theater's room.. Make a good connection the first time, and you won't need to touch it again for years.

Hooking up speakers is prettyeasy after you've carefully positioned the speakers in your surround-sound home theater.. Don't forget to connect the subwoofer Most subwoofers are active speakers (they have their own built-in amplifiers), so you don't use speaker wires to connect them.

Each speaker wire consists of two conductors, a positive and a negative. If you connect these out of phase (that is, the positive on the receiver to the negative on the speaker, and vice versa), you'll hear a definite effect on your sound.. You need a long analog audio interconnect cable, which runs between the Subwoofer Out or LFE output on the back of your receiver and the input on the subwoofer itself.. Before you plug and play, though, there are a few points to remember. Keep your speakers in phase.. When chandler copied the BK Butler design they totally messed up the Tone Stack Section. All schematics to compare the different versions are here on this thread [kuwaitigenius](#).. Now, this can be a very first image, bank of america, best buy, bing, baby driver, barnes and noble, big lots, babies r us, beyonce.. me'>Wiring Diagram Wind Turbine Charge Controller Circuit Simple Solar And Panels Caravanheise.. Make sure you have a tight connection. For the best sound quality and for a connection that won't stop working over time, make sure your speaker connections are solid.. A bare wire can be just fine however, and many smaller surround speakers don't have enough physical space to fit larger connectors.. Specifically, your speakers can't create the appropriate soundstage, so sounds that are supposed to clearly come from the right or the left won't..)Most speaker cables are color-coded red and black to make this job easier (or you may have a white stripe on the jacket of one of the conductors in the speaker wire).. To hook up speakers, you just connect the speaker wires to the appropriate outlets on the A/V receiver. ae05505a44 [Fix quarter crack horse hoof shoes](#)
